

Subject: A Foundation That Doubles as a Post Procedure Treatment

Cosmetic procedures are becoming increasingly popular annually and new innovations are being introduced to us constantly. However, we rarely hear about solutions for after treatment care. Luckily, [Oxygenetix](#) is here!

[Oxygenetix Oxygenating Foundation](#) can be applied to the skin after the procedure to aid in the healing process while covering up undesired redness, bruising, and signs of the procedure.

With Patented Ceravita[®], Oxygenetix topicals supports oxygen uptake to the skin cells to aid in the healing process while aloe barbadensis soothes the compromised skin.

This is your opportunity to provide your readers with a solution to post-procedure treatments!

Let me know if you have any upcoming roundups that [@oxygenetix](#) would be a good fit for!

Subject: THE Solution to Post Procedure Bruising & Redness

We all love a good face treatment, but what we don't love is the bruising and redness that comes after. Fortuitously, [Oxygenetix](#) foundation is THE aftercare treatment dermatologist & surgeons are recommended to their clients.

With active ingredients, such as, moisture-catching glycerin, soothing Aloe, and Patented Ceravita[®], your skin is in the direction of a fast & smooth recovery.

(PIC before and after treatment)

This technologically designed [foundation](#) covers & treats post- procedure concerns, helps build collagen and elastin, allows your skin to breath, has SPF 30 AND, vegan. What more can you ask for?

I'd love to send you samples to test out and see for yourself after your next facial!
What's your shade?
